Risk Managed

NIEMANN CAPITAL MANAGEMENT

STRATEGY APPROACH

The Niemann Capital Management, Inc. ("Niemann") Risk Managed strategy is a US-equity ETF Managed Portfolio that invests in ETFs that invest in domestic ETF indexes, industries, sectors and alternatives. The strategy uses a rotational approach with tactical allocation, trend following, relative strength and strict risk-management disciplines. Our ETF selection process includes our proprietary Risk-Balanced Opportunity™ calculation, which is similar to risk-adjusted return.

Risk Managed (RM) seeks to offer downside protection by incrementally going to cash or cash equivalents as we believe market risk becomes excessive. We monitor market risk daily by measuring the percentage of securities in an uptrend or a downtrend. As certain percentages are reached, RM activates our market risk on/off switch. When downside protection is activated, we stop buying new ETFs, evaluate existing positions and sell down-trending ETFs, putting the proceeds in cash or cash equivalents. At times, RM can be up to 100% cash in order to minimize potential losses.

STRATEGY STRENGTHS & BENEFITS

- Exposure to lower beta U.S. equity ETFs
- Potential to outperform S&P 500 Total Return Index
- Downside Protection (can go to cash to preserve principal)

Strategy Risk Spectrum

STRATEGY DESCRIPTION

The objective of the Risk Managed (RM) strategy is to exploit intermediate-term trends in the US equity market while seeking to limit risk. RM is typically invested in a broad universe of domestic equity ETFs, and will employ money market/cash positions during adverse market conditions to preserve assets. RM can be fully invested, partially in cash or completely in cash.

While RM may limit the overall losses suffered during major declines, it may also limit returns in advancing markets. However, the strategy seeks to outperform the S&P 500 TR Index over complete market cycles. RM is a growth strategy emphasizing capital preservation over investment return.

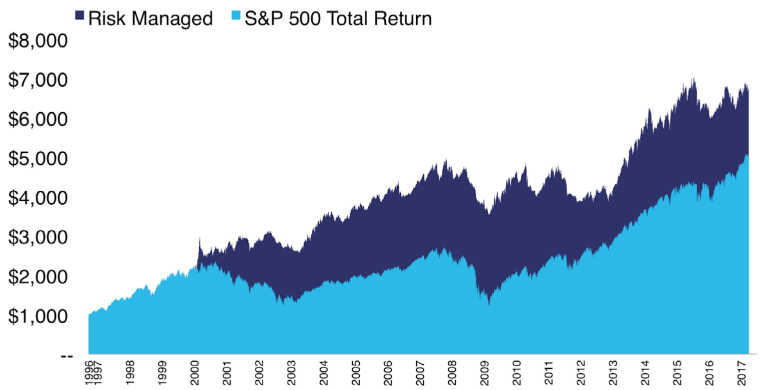
Risk Managed

GROWTH OF A $1,000 INVESTMENT (NET OF FEES)



DEFINITIONS

S&P 500 Total Return Index - Assumes reinvested dividends: The S&P 500 Total Return Index is a cap weighted, unmanaged group of 500 stocks as selected by the Standard & Poor's Publishing Company. They are usually the 500 largest companies in terms of market capitalization and are chosen to represent U.S. Equity Markets. The S&P 500 Total Return Index is used by many as a performance benchmark representing the "stock market" return.

Composite - Assumes reinvested dividends: The combined asset-weighted performance of all accounts within the Risk Managed strategy. Each strategy has its own composite and does not contain any accounts from another strategy. Net composite performance numbers are net of all fees and expenses and are reported in arrears. Performance shown for this composite includes all actual, fee-paying, fully discretionary accounts managed by Niemann using the Risk Managed strategy. The composite does not accurately present the performance of any specific account, which depends on investment timing and weighting, among other factors, that vary from account to account. Individual account performance may differ from the composite. Each account included in the composite is added after it has been under active management for at least one full month. A closed account is included through the last full calendar month that it was actively managed.

NCM believes that the comparison of the composite's performance to a particular market index is inappropriate. The portfolios generating the composite's performance contained only mutual funds through March 31, 2010 and included ETFs thereafter, which securities are not included in the S&P 500 TR Index, and were not nearly as diversified as that index. Because of the differences between the composite and the S&P 500 TR Index, NCM believes that such index is not comparable to the composite and it is not aware of any other index that is directly comparable.

Standard Deviation: A measure of volatility calculated using historical variations from the mean return of a portfolio. A higher standard deviation indicates that an investment has been historically more volatile. **Downside deviation:** A measure of downside risk that focuses on returns that fall below a minimum acceptable return. Standard deviation treats all deviations from the average - whether positive or negative - the same. Downside deviation focuses only on downside risk. **Beta:** A measure of volatility, or systematic risk, of a security or portfolio in comparison to the market as a whole. A beta of 1 indicates that a security's price has moved with the market. A beta of less than 1 means that a security has been less volatile than the market. A beta of greater than 1 indicates that a security's price has been more volatile than the market. **R-squared:** A measure of the correlation of a portfolio's returns to its benchmark. An R-squared of 1.00 means that all movements of a security are completely explained by movements in the index. A high R-squared (between .85 and 1.00) indicates that performance patterns have been in line with the index. An investment with a low R-squared (.70 or less) doesn't act much like the index. The lower the R-squared of an investment, the less meaningful is its beta. **Sharpe Ratio:** the average return earned in excess of the risk-free rate per unit of volatility or total risk. Generally, the greater the Sharpe ratio of an investment, the more attractive its risk-adjusted return has been. **Sortino Ratio:** This ratio is used to measure the level of downside risk in a portfolio. The higher the Sortino ratio, the better a portfolio has performed relative to the risk taken.

DISCLOSURE

Past performance does not guarantee future results. It should not be assumed that investors will experience returns, if any, comparable to those shown here. Any stock market transaction can result in either profit or loss. Additionally, the performance of Niemann's portfolios should also be viewed in the context of the broad market and general economic conditions prevailing during the periods covered by the performance information. Market and economic conditions could change in the future, producing materially different returns. Investment strategies may be subject to various types of risk of loss including, but not limited to, market risk, credit risk, interest rate risk and inflation risk. In addition, strategies with international capabilities are subject to risks including, but not limited to, currency fluctuations, economic instability and political instability. The foregoing data were prepared by NCM and have not been compiled, reviewed or audited by an independent accountant. Through March 31, 2010, Risk Managed portfolios included only mutual funds. After that date, they included ETFs and beginning in 2011, have included primarily ETFs. Further, through June 30, 2011, this strategy used inverse ETFs for hedging purposes. Inverse ETFs can be used to profit from declines in broad market indexes. After that date, this strategy did not use inverse ETFs. Performance after the foregoing dates differs materially from, is not comparable to, performance before those dates and is shown only to demonstrate NCM's experience in managing portfolios. Further, the results do not reflect performance in all economic cycles. Please visit us online at www.ncm.net or call 1-800-622-1626 for current performance information or for a complete list and description of Niemann's composites.

Net Performance results are presented net of transaction costs and Niemann's actual management fees. They reflect the reinvestment of dividends, interest and other earnings and the deduction of NCM's annual management fees, which may vary from 1% to 2.3%, depending on the amount of assets in an account. Performance results also reflect the deduction of brokerage and custodial fees and other costs. Such other costs include fees charged by the managers of the funds in which the portfolios comprising the composite were invested, which fees are disclosed in those funds' prospectuses and are paid by NCM clients in addition to NCM's advisory fees. See NCM's Form ADV Part 2 for more information about such costs.

All Niemann profiles & reports have been prepared solely for informational purposes, and are not an offer to buy or sell, or a solicitation of an offer to buy or sell, any security or instrument or to participate in any particular trading strategy or an offer of investment advisory services. Investment advisory and management services are offered only pursuant to a written Investment Advisory Agreement, which investors are urged to read and consider carefully in determining whether such agreement is suitable for their individual needs and circumstances.

Niemann and its affiliates and its employees may have positions in and may affect transactions in securities and instruments mentioned in these profiles and reports. Some of the investments discussed or recommended may be unsuitable for certain investors depending on their specific investment objectives and financial position.

Niemann is an SEC-registered investment advisor that provides tactical third-party management for discretionary individually managed accounts and provides non-discretionary investment advice to other investment advisers. Niemann offers management in a variety of strategies and variable annuity and variable universal life insurance products that are already held in clients' accounts when they become clients. Niemann does not market or sell any annuity or insurance products. Niemann is not affiliated with any broker/dealer, and works with multiple broker/dealer channels and their associated financial professionals to distribute its products and services. Please check with your financial advisor for more details about Niemann and Niemann's product offerings.
